Location: Prague, Czech Republic

Profile

Java backend developer with 3 years of experience in building microservice applications on the Spring Boot platform. Skilled in designing scalable systems, optimizing database queries (PostgreSQL, MySQL), and ensuring application security (JWT authentication, HTTPS). Proficient in developing REST APIs and integrating external services. Quick learner of new technologies – while my main focus is Java, I can also adapt to other backend languages if required. Looking to contribute my skills to challenging projects and continue professional growth.

Work Experience

Java Backend Developer – NLS (06/2023 – 05/2025)
Project: Internal CRM system for client and workflow management (microservices architecture).

- Designed and implemented a service for processing Excel files, converting spreadsheets into XML format for use across multiple system modules.
- Developed and optimized high-performance and reliable RESTful APIs (Java 17, Spring Boot) for core CRM functionalities.
- Improved PostgreSQL performance by optimizing SQL queries and introducing appropriate indexing (~20% faster queries with large data volumes).
- Implemented secure authentication and authorization using JWT tokens and HTTPS encryption, strengthening the protection of sensitive data.
- Collaborated closely in an Agile Scrum team (6 members), participating in sprint planning, code reviews, and architectural discussions.

Java Developer – TelcoSoft Solutions (07/2022 – 06/2023)
Project: Platform for network traffic management and SMS gateway for a telecom operator.

- **Developed microservices in Java 17 (Spring Boot) for modular network configuration processing.**
- **Applied event-driven communication with Apache Kafka and used Redis for in-memory configuration storage.**
- **Designed and implemented REST API interfaces, integrating them with the existing C++ backend – new Java services worked seamlessly with legacy components.**
- **Optimized relational data models in PostgreSQL (JPA/Hibernate) for more efficient queries and reduced application latency.**
- **Applied microservice architecture patterns (API Gateway, event sourcing) to improve scalability and reliability.**

- **Wrote unit and integration tests (JUnit, Mockito, Testcontainers), significantly improving stability during deployments.**
- **Worked in a 10-member Scrum team (developers, tester, product owner), regularly presenting results at sprint demos and contributing to retrospectives.**
  Result: Delivered a modern web interface that reduced network configuration time by ~30% and minimized administrator errors, significantly improving operational efficiency.

IT Support – NTK SFERA-S (03/2016 – 06/2017, Almaty, Kazakhstan)

- **Provided remote user support and managed IT infrastructure (HelpDesk).**
- **Installed and configured new PCs, managed IT equipment inventory.**
- **Maintained office hardware and resolved basic networking and system issues.**

Skills

- **Programming: Java 17, Spring (Boot, Security), Hibernate, JPA, REST API, Microservices, Kafka**
- **Databases: PostgreSQL, MySQL (schema design, query optimization)**
- **DevOps & Tools: Docker, Git/GitLab, CI/CD (GitLab CI), VMware, Linux (Ubuntu)**
- **Testing: JUnit, Testcontainers, Mockito (unit and integration testing)**
- **Networking & Security: HTTPS, JWT, TCP/IP, DNS, DHCP, VoIP**
- **Teamwork: Agile methodologies (Scrum), code reviews, version control (GitHub, GitLab)**

Education

- **VUT FEKT**
  Field: Information Security
- **Central Asian Technical Economic College Almaty**
  Field: Computer Hardware and Software

Languages

- **English**
- **Czech**
